Arnebeck, Bob. "Short History of Yellow Fever." *Bob Arnebeck's Web Links*. 30 Jan. 2008. Web. 10 Mar. 2011. <<http://bobarnebeck.com/history.html>>.

Yellow fever did not kill as many people as other diseases, but frightened people more.

"The fever had a remission two to three days after the on-set of symptoms of nausea and general debility which sent some victims back to their jobs and into the streets only to drop dead."

"Yellow Fever (jungle Yellow Fever, Urban Yellow Fever)." *New York State Department of Health*. June 2004. Web. 10 Mar. 2011.

<http://www.health.ny.gov/diseases/communicable/yellow_fever/fact_sheet.htm>.

"Who gets yellow fever? This disease can affect both sexes, all ages and races. Jungle yellow fever, of tropical Central and South America, occurs predominantly among adult males 20 to 40 years old who are exposed in the tropical forests."

People from the U.S. traveling to other countries should get the shot for yellow fever before they go so they don't catch the disease.
